## PROFESSIONAL SUMMARY

---

Senior Data Engineer with 3.5 years of experience in designing, developing, and optimizing large-scale data engineering solutions across enterprise environments. Proven expertise in building scalable data pipelines, implementing Change Data Capture (CDC) frameworks, and enabling real-time and batch data processing across distributed systems.

Strong hands-on experience with **Google Cloud Platform (Dataflow, Pub/Sub, Cloud SQL)** and modern data architecture patterns, including cloud migration and database replatforming initiatives. Skilled in working with **PostgreSQL, SQL Server, Oracle**, and other relational databases, with a strong focus on performance tuning, data modeling, and ensuring data integrity.

Experienced in developing robust data workflows using **Python, SQL, and Java**, along with implementing **CI/CD pipelines using GitLab** and following modern **DevOps practices** for scalable and reliable data deployments. Demonstrated ability in managing **CDC pipelines using Qlik Replicate**, ensuring high availability, low-latency data replication, and consistency across systems.

Proficient in delivering end-to-end ETL/ELT solutions, supporting both batch and streaming data use cases, and collaborating effectively with cross-functional teams including infrastructure, analytics, and product engineering. Adept at working in Agile environments, participating in architecture discussions, and driving continuous improvements in data platform reliability and efficiency.

## TECHNICAL SKILLS

---

**Programming Languages:** Python, SQL, Java

**Cloud Platforms:** Google Cloud Platform (GCP) – Dataflow, Pub/Sub, Cloud SQL

**Data Engineering:** ETL/ELT Pipeline Development, Data Modeling, Data Integration, Batch & Streaming Processing

**CDC (Change Data Capture):** Qlik Replicate, Real-time Data Replication, Low-latency Data Pipelines

**Databases:** PostgreSQL, SQL Server, Oracle

**Big Data & Data Processing:** Distributed Data Processing, Event-driven Architectures, Streaming Data Pipelines

**Data Migration & Replatforming:** GCP 2.0 Cloud Migration, Database Replatforming, Legacy System Modernization

**DevOps & CI/CD:** GitLab CI/CD, Version Control, Automated Deployment Pipelines

**Tools & Frameworks:** Git, GitLab, Dataflow SDKs, Pub/Sub Messaging Systems

**Operating Practices:** Agile Methodology, Scrum, Production Support, Incident Troubleshooting

**Data Quality & Governance:** Data Validation, Data Reconciliation, Data Consistency Checks

**Monitoring & Reliability:** Pipeline Monitoring, Logging, Observability, Performance Optimization

## PROFESSIONAL EXPERIENCE

---

**Senior Data Engineer | Meta, USA**

**Jan 2025 – Present**

- Worked as part of the Data Services team supporting enterprise-scale data platforms, focusing on Change Data Capture (CDC) pipelines and internal data products.
- Designed and implemented scalable CDC solutions to enable real-time and near real-time data replication across heterogeneous databases.
- Played a key role in GCP 2.0 migration initiatives, supporting modernization and replatforming of legacy data systems to cloud-native architecture.

- Developed and optimized data pipelines using Google Cloud Platform (GCP) services including:
  - Dataflow for batch and streaming ETL processing
  - Pub/Sub for event-driven messaging and ingestion
  - Cloud SQL for managed relational database workloads
- Managed and supported database replatforming efforts, primarily working with PostgreSQL and SQL Server environments.
- Hands-on experience with CDC pipeline management using Qlik Replicate, ensuring high availability, low-latency replication, and data consistency across systems.
- Built and maintained scalable data engineering workflows using Python, SQL, and Java, supporting both batch and streaming data use cases.
- Implemented and maintained CI/CD pipelines using GitLab, ensuring automated testing, deployment, and version control for data engineering workloads.
- Collaborated closely with cross-functional teams including infrastructure, analytics, and product engineering to deliver robust and scalable data solutions.
- Followed modern DevOps practices, ensuring observability, monitoring, and reliability of data pipelines in production environments.
- Acted as a self-starter contributing to architecture discussions, design reviews, and continuous improvement of data engineering standards.

## **Data Engineer | Infosys, India**

**Jun 2021 – Jul 2023**

- Worked as a Data Engineer supporting enterprise data warehousing and analytics solutions across large-scale client environments.
- Designed, developed, and maintained ETL/ELT pipelines for ingesting and transforming structured and semi-structured data from multiple source systems.
- Built and optimized SQL-based data processing workflows for high-volume transactional and reporting systems.
- Developed data integration solutions using Python and SQL, ensuring efficient data movement across staging, warehouse, and reporting layers.
- Worked extensively with relational databases (SQL Server, Oracle, PostgreSQL depending on project needs) for data modeling, querying, and performance tuning.
- Created and maintained data pipelines in batch processing environments, ensuring data accuracy, completeness, and consistency.
- Implemented data validation and reconciliation logic to ensure high data quality across downstream analytics systems.
- Collaborated with cross-functional teams including business analysts, backend engineers, and QA teams to deliver reliable data solutions.
- Participated in requirement analysis, technical design discussions, and production deployment activities.
- Supported production systems by troubleshooting data issues, resolving pipeline failures, and ensuring SLA adherence.
- Followed Agile methodologies for iterative development and participated in sprint planning, code reviews, and retrospectives.
- Contributed to automation of repetitive data workflows, improving operational efficiency and reducing manual intervention.

## **EDUCATION:**

---
